

Benefits

- Saves analysts' time by automatically tracking grant-related activities, overtime and consumables
- Saves the grant manager time as all grant-related statistics are easily reported in a set of customizable reports
- Simplifies the documentation process as multiple grants, funding sources and contracts can be automatically tracked
- Reports are easy to generate for fast and convenient reporting to oversight boards

Feature Overview: Grant Tracking

Track the employees, consumables and samples associated with a specific grant

Does your grant manager spend hours preparing NIJ grant reports? Do lab staff currently use a spreadsheet to track activities for grant reporting? Are errors occasionally discovered, requiring lab staff to take hours or even days away from processing cases in order to fix it? Would it save you and your team time and exasperation if all of that was completely automated?

Automatic grant tracking is now available in STACS-CW Enterprise, the leading forensic DNA processing software for casework laboratories. Labs can capture grant-funded processing statistics for NIJ and other funding organizations and for lab management.

Your lab can automatically track and allocate the following to specific grants or other funding sources:

- **purchased consumables**
- **staff employee hours**
- **contract employee hours**
- **overtime hours**
- **performance statistics such as the number of samples processed, profiles developed and profiles entered into CODIS**

Grant Consumable Report

The grant manager saves time as all grant-related data is automatically captured, and can easily be reported. And analysts can focus on working cases instead of spreadsheets, since the details of their work are automatically tracked and assigned to the appropriate funding source.

Grant reports are fully customizable, making it easy and fast to generate exactly the reports required by lab management and the oversight board.

Feature Overview: Grant Tracking

About STACS DNA

STACS DNA™ helps DNA labs meet performance and accountability expectations. We do this through sophisticated software that, based on each customer's specific workflows, becomes the integrated hub of their automated DNA sample processing.

The result? An unprecedented acceleration in the ability to process DNA samples, leading to increased productivity, decreased costs, reduced backlogs and a faster time to justice. Our customers also report reduced errors and increased data quality, resulting in smoother problem resolution and audits, and decreased use of paper.

STACS DNA brings more than a decade of expertise working closely with the DNA community. We work with databank and casework labs of all sizes.

How it works

A Grant Tracker 'switch' is automatically set to 'On' for grant-funded users, and can be turned on manually for any other user. These users' activities are automatically recorded against the selected grant. No other actions are required. There is no limit to the number of grants that can be tracked.

STACS-CW Enterprise notifies a grant-funded user if their assigned grant is nearing its end date and the user is prompted to assign a new grant. The user can specify the desired number of days' notice, and the end date of the grant can be changed if the grant is extended.

About STACS-CW Enterprise

STACS-CW Enterprise is sample tracking and control software specifically designed for casework DNA labs. It has been proven to increase sample processing capacity by more than 40% while meeting all forensic accreditation standards—with no new hiring, and with no need to acquire or replace a lab's current forensics LIMS. Rather, STACS-CW Enterprise addresses the shortcomings of current forensics LIMS faced by DNA labs. It is simply the most effective DNA sample processing software available today.
