

STACS[®]

Try STACS in your lab for 60 days!

You've heard STACS users rave about how STACS helped their lab save time, improve data quality, mitigate risk and increase compliance.

You've seen a STACS demo, and would love to see STACS in operation in your own lab.

But lab and IT staff time is stretched and funding is scarce right now. How can you justify getting STACS into your lab?

The STACS Pilot Program makes it easy for you and your team to evaluate STACS in your lab.

Here's what you get for 60 days:

- STACS-CW or STACS-DB configured according to your SOPs
- Three days of training at your lab
- Scheduled check-in webinars
- Full support via telephone, email or support portal

Is there a catch?

There is a nominal fee to cover our expert's travel. If you license STACS within two years of pilot completion, the fee will be applied to your purchase.
