

Try Track-Kit across your city or state for 90 days!

Washington, Michigan, Arizona, Texas and now Nevada – they've all completed or are in the process of rolling out Track-Kit to track every sexual assault kit across their state. This gives vital SAK status and location information to thousands of survivors, DNA lab staffers, law enforcement officers, prosecutors, medical facility staffers and many others. Track-Kit helps these states meet their legislative obligations. States rave about how STACS DNA helped them implement with ease – often with tight timelines – by managing the entire project, including all end user training and support.

You'd love to see how Track-Kit would work in your own city or state.

But your IT staff time is stretched and funding is scarce right now. How can you justify getting Track-Kit into your jurisdiction?

The Track-Kit Pilot Program makes it easy for you and your team to evaluate Track-Kit in your city, region or state.

Who can participate?

- One DNA lab with 2-3 medical facilities and all law enforcement agencies that pick-up from those medical facilities
- One policy (admin) center
- Prosecutors (optional)

Here's what you get for 90 days:

- Track-Kit configured for your jurisdiction
- Three days of in-person training at your policy center
- Webinar training for all users at the DNA lab, medical facilities, law enforcement agencies and prosecutors' offices
- Scheduled policy center check-in webinars
- Full support

Is there a catch?

There is a nominal fee to cover our expert's travel. If you license Track-Kit within two years of pilot completion, the fee will be applied to your purchase.
